

BROWSER FOR USE IN ACCESSING HYPERTEXT DOCUMENTS IN A MULTI-USER COMPUTER ENVIRONMENT

5

Abstract of the Disclosure

10 An apparatus, program product, and method that track where particular users
are browsing within a multi-user computer environment, and provide such
information to one or more users within the environment to permit greater
interactivity among the users. By enabling users to identify and interact with other
users in a browsing environment, users may be permitted to access lists of favorite
documents, home pages, navigational histories, etc. of other users while browsing to
facilitate the dynamic location and retrieval of useful information. Also, users may be
permitted to directly communicate with one another while browsing, e.g., via
electronic messages, real-time discussions, etc.
